Oklahoma Cooperative Extension Fact Sheets
are also available on our website at:
facts.okstate.edu

A successful garden begins with the selection of varieties that are adapted to the area. If you are unsatisfied with your present selections, this list can offer some alternatives. If you are looking for a new variety, try it next to the one you presently grow for comparison. Then you can make an informed decision about the new variety. You may find something that grows well in your area that is not included in this list. It's all part of the joy of gardening.

The varieties listed below have proven to be successful either in variety trials conducted by Oklahoma State University or in garden plantings throughout the state. This is only a partial list of satisfactory varieties and seed sources. There are many excellent varieties available through these and other seed companies. Friends, your local county Extension educator, a knowledgeable gardener, or local garden center/nursery personnel are also excellent resources.
